PROFILE

A novice android developer. I started my path in learning programming in 2019 with studying C++, in the next two years I studied C#, Python, Java and related technologies ASP.net , Django, servlet and JSP. In 2022, he became a finalist for server Eurasia in the ICPC student team Programming Olympiad, and there, after communicating with representatives of the IT company and other novice developers, he began to study android development. The courses of the IT Academy "Android Application Development" helped me speed up and simplify the learning process, which ended with the successful defense of the final project in August 2023. In parallel, I also studied markup languages such as html, css, xml and maven and gradle assembly tools.

SKILLS

- Kotlin, Java.
- RxJava 2, Coroutines, Retrofit, Dagger 2, Koin, Glide, Room.
- MVVM, MVP, Design patterns, SOLID, Clean arhitecture, OOP.
- Git, Figma, Firebase.

COURSES

- Android Application Development
